

BREAST CANCER

Breast cancer is a disease in which cells in the breast grow out of control. It can spread to other parts of the body.

Breast cancer is almost 100% survivable when found early on a mammogram.

SYMPTOMS

- New lump in the breast or armpit
- Nipple discharge other than milk
- Pain around any part of the breast
- Swelling of part of the breast
- Irritation or dimpling of skin
- Redness or flaky skin

STATISTICS

1 in 8 women are diagnosed with breast cancer

1 in 38 women will die from breast cancer

PREVENTION

Mammograms are important in detecting and preventing cancer. Woman over 40 should have a mammogram once per year.
